DHL Parcel DE live in Production – Germany DHL, international GLS (27.10.2026)

Status 27.10.2026, 16:30: DHL Parcel DE is live in Production. Germany ships with DHL, all other countries with GLS. First DHL pickup booked for **Wednesday 28.10.2026**. Follow-up of the staging test (26.10.2026).

> Odoo 19 Production · BrowseInfo DHL Parcel DE connector · Emipro Shopify connector. Credentials and customer data are intentionally not stored here. All investigation was done with read-only commands.

1. Result

Area	Status
Carrier assignment Germany → DHL Parcel DE, international → GLS Germany	**live**
Block Validate when a delivery has no carrier	**live (rule "Block Validate without Carrier")**
DHL / GLS / CHECK CARRIER badge on the packing cards (Pack-Übersicht)	**live (server action "Rebuild Packing Card")**
DHL return receiver `deu` filled in automatically (Germany)	**live since 20.10 (rule "DHL – Automatic Return Receiver")**
Shopify German rate renamed "GLS Deutschland" → "DHL Paket"	**done (connector created carrier 27, handled by the rules)**
Warehouse sign DHL / GLS (A4, DE/EN)	**printed version: Versandhinweis_DHL_GLS.pdf**
DHL pickup 28.10.2026 (Bedarfsabholung, Langenwiesen 2, contact Elena)	**booked**
Return label decision deu (IQ pays) vs deu_SZ (customer pays)	**open – Florian**

2. How the carrier is decided now

```
Shopify checkout: customer picks a rate (e.g. "DHL Paket", "GLS EU")
  → Emipro creates the order, then writes the matching PRICE carrier (sale_order.py line 458)
  → rule "Shipping add" / "Shipping add – International (GLS)" fires on that edit
  → Germany: price carrier → DHL Parcel DE (25)   ·   other countries: → GLS Germany (2)
  → order confirmed → delivery takes the carrier over (Propagation of carrier)
  → GLS incoterm rules (EFTA 20 / Outside EU 40) add the incoterm on the delivery
```

Key finding: only three carriers can create labels. Every Shopify rate maps to a *fixed* price carrier, which only carries the shipping price:

ID	Carrier	Type	Orders last 60 days
2	GLS Germany	**gls_germany (labels)**	–
25	DHL Parcel DE	**dhl_parcel_de (labels)**	new
26	DHL Parcel DE – International	**dhl_parcel_de (labels)**	not used yet
15	GLS Deutschland	fixed	950 (DE)
11	GLS EU	fixed	221
21	Standard	fixed	58 (non-DE)
18 / 19	GLS Europa nicht-EU Zone 1 / 2	fixed	38 / 2
16 / 20 / 22 / 24	GLS Welt Zone 1 / Zone 3 / Australien & NZ / UK	fixed	25 / 3 / 1 / 1
27	DHL Paket (auto-created 27.10 14:59 after the Shopify rename)	fixed	new
1 / 23	Direct Sales / Shipping Costs	fixed	manual / unused

Before today, "Auto Set Carrier" replaced every price carrier with GLS Germany on the delivery. Since it is archived, the two Sales Order rules must replace the price carriers themselves – that is why their lists contain all fixed GLS/DHL carriers.

3. Final configuration in Production

ID	Rule	Model	Setting
8	Shipping add	Sales Order	On create and edit · When updating: **Delivery Address, Delivery Method** · Action: Delivery Method → **DHL Parcel DE (25)**
45	Shipping add – International (GLS)	Sales Order	On create and edit · When updating: **Delivery Address, Delivery Method** · Action: Delivery Method → **GLS Germany (2)**

ID	Rule	Model	Setting
5	Auto Set Incoterms – EFTA	Transfer	only Gls Incoterm → 20 (carrier action deleted)
6	Auto Set Incoterms – Outside EU	Transfer	Gls Incoterm → 40 · **carrier → GLS Germany action still present (harmless, delete to match staging)**
7	Auto Set Carrier	Transfer	**archived** (rollback option)
new	Block Validate without Carrier	Transfer	On create and edit · Before: Status ≠ Done · Apply on: Status = Done, Type = Delivery, Carrier not set · Execute Code → UserError
–	DHL – Automatic Return Receiver	Transfer	since 20.10 · Apply on: receiver not set · When updating: Carrier, Contact, Operation Type · German DHL return → `deu`
–	Rebuild Packing Card (server action)	Transfer	writes `x_studio_packing_card`; now with DHL / GLS / CHECK CARRIER badge (code)

Apply on – Shipping add (Germany → DHL)

```
["&", "&", ("state", "in", ["draft", "sent"]), ("partner_shipping_id.country_id", "in", [57]), "|", ("carrier_id", "=", False), ("carrier_id", "in", [2, 15, 27])]
```

Apply on – Shipping add – International (GLS)

```
["&", "&", ("state", "in", ["draft", "sent"]), ("partner_shipping_id.country_id", "not in", [57]), "|", ("carrier_id", "=", False), ("carrier_id", "in", [25, 11, 15, 16, 18, 19, 20, 21, 22, 24, 27])]
```

Kept untouched by both rules: 1 Direct Sales, 26 DHL International, 23 Shipping Costs, and anything on a confirmed order. No loops: the Germany rule writes 25 (not in its list), the international rule writes 2 (not in its list).

4. What happened on go-live day (27.10.2026)

Time	Event	Fix
~14:15	Staging rules applied in Production (rule 8 changed, rule 45 created, EFTA carrier action deleted, Auto Set Carrier archived)	–
14:30	#IQD-99163 (DE) arrived with "GLS Deutschland" (15) – rule did not fire. Staging never showed this because the test store's rates were not linked to any Odoo carrier.	15 added to the Germany list
14:49	#IQD-99164 still GLS Deutschland. Emipro sets the carrier with a separate `write` after creating the order (`create_shopify_shipping_lines`, sale_order.py line 458) – an edit the rule ignored.	**Delivery Method** added to "When updating" (both rules)

Time	Event	Fix
14:4x	Carrier usage of the last 60 days checked: "Standard" (21) used by 58 international orders	21 + all GLS price carriers added to the international list
14:45	New rule "Block Validate without Carrier" created (Production)	–
14:59	German Shopify rate renamed to "DHL Paket" → connector found no carrier with that code and created **carrier 27 "DHL Paket" (fixed)** (delivery_carrier.py `shopify_search_create_delivery_carrier`, line 218). #IQD-99165 got it.	27 added to both lists
15:02	WH1/OUT/07341 (#IQD-99165) validated with "DHL Paket" → no label, chatter "Sendungsnummer False". Not blocked because the carrier was not empty.	label to create by hand (see next steps)
16:00	Packing card badge live; cards show DHL (#IQD-99167), GLS (#IQD-99161), CHECK CARRIER (#IQD-99165)	–

> **Lesson:** never delete or archive carrier 27 "DHL Paket" or the other price carriers – the connector would recreate them with a new ID that the rules don't know. If a Shopify rate is renamed or added again, run check 9.2 and add the new ID to the right list.

5. Returns (DHL)

- Rule "DHL – Automatic Return Receiver" (Production, since 20.10; Staging ID 41) fills `deu` on German DHL returns when the receiver is empty. Tested 27.10 on a manual return: Carrier → DHL Parcel DE → Save → `deu` filled, button changed from Get Receivers to Change Receiver.
- **Print Return Label only appears on real returns** created with the *Return* button of the original delivery (standard Odoo: the return lines must be linked to the original moves). A return created via Returns → New never shows it.
- Team rule: open the original delivery (or sales order → delivery) → **Return** → Print Return Label. No original delivery in Odoo → create the label in the DHL Geschäftskundenportal (Retoure, receiver deu) and book the return in Odoo without label.
- "Change/Get Receivers" gives `401 … no apiproduct match found`: the DHL developer app behind the API key lacks the API product the receiver lookup uses. Not needed for German returns.
- Only receivers on the live DHL account: `deu` (Retoure Online, billed to IQ Dogsport) and `deu_SZ` (Selbstzahler). No international receivers.
- Never click Print Return Label in Production for a test – it creates a real DHL return shipment. Test returns WH1/RET/00523 and 00524 to be cancelled.

6. Pickup

- DHL Bedarfsabholung booked for **28.10.2026**, 08:00–18:00, IQ Dogsport GmbH, Langenwiesen 2, 85276 Pfaffenhofen, contact Elena, notifications on. The parcel count is an estimate for the driver's planning.
- Keep DHL and GLS parcels separate (sign in the packing area).
- Next: ask DHL business customer service for a **Regelabholung** (fixed daily pickup) instead of booking every day.

7. Labels

Zebra ZD421, one blank thermal roll for DHL and GLS. DHL Label Type 103×150 (910-300-410) tested on the GLS roll on 26.10 – works. Set Label Type on DHL Parcel DE and DHL International accordingly.

8. Next steps

1. **Verify automatic assignment** on the next German and the next international Shopify order (check 9.1): DE → 25 / 25, others → 2 / 2.
2. **Fix open deliveries with a price carrier** before validating (check 9.3): Germany → DHL Parcel DE, others → GLS Germany. Rebuild their packing cards.
3. **#IQD-99165 / WH1/OUT/07341** (done without label): carrier → DHL Parcel DE; use "Send to Shipper" if shown, otherwise create the label in the DHL portal and add the tracking number to the Shopify order.
4. Confirm the saved domains (check 9.4) contain 27 (both) and 21 (international).
5. Delete the carrier action in rule 6 (Outside EU) to match staging (optional, harmless today).
6. Florian: `deu` or `deu_SZ` for returns; international DHL returns; DHL prices per zone.
7. DHL: Regelabholung; API product for receiver lookup (developer.dhl.com → My Apps).
8. Shopify: shipping page, policy and notification texts ("Germany DHL, international GLS").
9. Warehouse: sign printed and explained; CHECK CARRIER badge = fix carrier before Validate; Block Validate rule blocks empty carriers (customer pickups/samples → Direct Sales).
10. Optional: packing card always in German (today it follows the language of the user who triggers it).
11. Security: rotate credentials that were visible in screenshots. Emipro: GraphQL order-risk bug (see staging doc).

9. Read-only checks (Odoo.sh → Production → SHELL)

9.1 Newest Shopify orders: order and delivery carrier

```
PGOPTIONS='-c default_transaction_read_only=on' psql -P pager=off -c "SELECT so.name, so.state, so.carrier_id AS order_carrier, c.code AS country, string_agg(DISTINCT sp.carrier_id::text, ',') AS delivery_carrier, so.create_date FROM sale_order so LEFT JOIN res_partner p ON p.id = so.partner_shipping_id LEFT JOIN res_country c ON c.id = p.country_id LEFT JOIN stock_picking sp ON sp.sale_id = so.id WHERE so.name LIKE '#IQD-%' GROUP BY so.id, so.name, so.state, so.carrier_id, c.code, so.create_date ORDER BY so.id DESC LIMIT 15;"
```

9.2 All carriers with type and Shopify code (after any Shopify rate change)

```
PGOPTIONS='-c default_transaction_read_only=on' psql -P pager=off -c "SELECT id, to_jsonb(c)->'name'->>'en_US' AS name, c.delivery_type, c.shopify_code, c.shopify_source, c.create_date FROM delivery_carrier c WHERE c.active ORDER BY id;"
```

9.3 Open deliveries still on a price carrier

```
PGOPTIONS='-c default_transaction_read_only=on' psql -P pager=off -c "SELECT so.name, sp.name AS delivery, sp.state, sp.carrier_id FROM stock_picking sp JOIN stock_picking_type spt ON spt.id = sp.picking_type_id LEFT JOIN sale_order so ON so.id = sp.sale_id LEFT JOIN delivery_carrier dc ON dc.id = sp.carrier_id WHERE spt.code = 'outgoing' AND sp.state NOT IN ('done','cancel') AND (sp.carrier_id IS NULL OR dc.delivery_type = 'fixed') ORDER BY sp.id DESC;"
```

9.4 Saved rule domains and triggers

```
PGOPTIONS='-c default_transaction_read_only=on' psql -P pager=off -c "SELECT a.id, to_jsonb(a)->>'name' AS name, a.active, to_jsonb(a)->>'filter_domain' AS apply_on, (SELECT string_agg(f.name, ',') FROM base_automation_ir_model_fields_rel r JOIN ir_model_fields f ON f.id = r.ir_model_fields_id WHERE r.base_automation_id = a.id) AS when_updating FROM base_automation a WHERE a.id IN (5, 6, 7, 8, 45);"
```

9.5 What each rule action writes

```
PGOPTIONS='-c default_transaction_read_only=on' psql -P pager=off -c "SELECT s.base_automation_id AS rule, to_jsonb(a)->>'name' AS rule_name, a.active, f.model, f.name AS field, s.value FROM ir_act_server s JOIN base_automation a ON a.id = s.base_automation_id LEFT JOIN ir_model_fields f ON f.id = (to_jsonb(s)->>'update_field_id')::int WHERE s.state = 'object_write' ORDER BY 1;"
```

9.6 DHL deliveries without tracking number (label missing)

```
PGOPTIONS='-c default_transaction_read_only=on' psql -P pager=off -c "SELECT sp.name, sp.origin, sp.state, sp.date_done FROM stock_picking sp JOIN delivery_carrier dc ON dc.id = sp.carrier_id WHERE dc.delivery_type = 'dhl_parcel_de' AND sp.state = 'done' AND sp.carrier_tracking_ref IS NULL ORDER BY sp.id DESC LIMIT 20;"
```

10. Rollback

1. Automation Rules → filter Archived → **Auto Set Carrier** → Unarchive (everything back to GLS Germany on deliveries).
2. Archive "Shipping add – International (GLS)"; set "Shipping add" action back to GLS Germany or archive it.
3. Archive "Block Validate without Carrier" if it blocks legitimate deliveries.
4. Shopify: rename "DHL Paket" back to "GLS Deutschland" (carrier 15 is still there).
