Product data queues stuck – duplicate Shopify template links (27.10.2026)

Status 27.10.2026: cause proven and fixed for 4 of 6 products. Follow-up of Shopify duplicate mappings (26.10.2026) – this time on the *product (template)* level.

> Odoo 19 Production · Emipro Shopify connector. All checks read-only; changes = archiving wrong link records one at a time with before/after checks.

1. Symptom

Product Data Queues stuck in Draft / Partially Completed since 23.10.2026 19:10 (PDQ006640 … PDQ006762), 27 draft lines. Server log:

```
product_data_queue_line.py, line 118, in process_product_queue_line_data
ValueError: Expected singleton: product.template(89, 178)
```

2. Cause

- One Shopify product linked to two or three Odoo templates in `shopify.product.template.ept`. The connector crashes and the whole queue run stops – products behind the broken line stay Draft too.
- All 17 duplicate links (and 178 template + 601 variant links in total) have `write_date` 23.10.2026 13:29:21 UTC – the instance reactivation switched the intentionally archived old links back on (written by the user who reactivated).
- Proof: the same products processed fine until 22.10 (Wurfversteck 15× done, PSD 21×, Top-Matic 13×) and only drafts since 23.10.
- Not caused by archiving mappings 749/1169 on 26.10 (that was the variant table).

3. Duplicates and status

Shopify product	Archive (wrong)	Keep (correct)	Status
10709793145096 Wurfversteck	205 → tmpl 89 (+ variant 750 old Set variant)	301 → 178 (variant 1109)	**archived ✓, PDQ006762 processed, 8/8 done**
10709806711048 Top-Matic Profi Set	199 → 83 (variants 737–739)	302 → 174 (1110–1112)	**archived ✓**
12205141098760 Softshell 3.0 Unisex (SSU3)	332 → 382, 333 → 383 (variants 1226–1239)	334 → 384 (1240–1246)	**archived ✓, health check 7/7 ok; 2.0 Unisex/Damen and 3.0 Damen unchanged**
12109893730568 PSD Trainingsshirt	316 → 107 (variants 1170–1173 → old TDP.OL!)	324 → 361 (1195–1199, 1280)	**checked, safe – archive and confirm (also fixes PSD M–2XL orders landing on TDP.OL)**
10709825028360 T-Shirt 'Power' Olive	114 → 107 (variants 379–384)	327 → 365 (1202–1207)	**checked, safe – archive and confirm (preventive)**
E-Geschenkgutschein / Geschenkgutscheinkarte / IQ Geschenkgutschein	271/337, 276/338 (both archived templates), 303/330 (same template)		leave – decision later

Harmless leftovers (old archived product with an active link but a different Shopify variant, e.g. FUN.bl, "- ALT IQ Softshelljacke"): no crash, clean up later together with the ~250 others.

4. Procedure (one link at a time)

1. Before check: variant links under the wrong and the correct template link (query 6.2). Stop if anything under the wrong link points to an *active* product that has no twin under the correct link.
2. Open `/odoo/shopify.product.template.ept/<ID>` → check Shopify Template Id and Product Template → ⚙ → **Archive**. Never Delete, never Publish/Unpublish (those talk to Shopify), never Export.
3. After check (query 6.3) → wrong `f`, correct `t`.
4. Process the affected queue manually; never "Set To Completed" (skips the import).

Archiving a link sends nothing to Shopify and changes no product, stock or order. Undo: filter Archived → Unarchive.

5. Queues

Queue	Status 27.10
PDQ006762	**Completed**
PDQ006640, 006667, 006726, 006727, 006737	ready – process manually

Queue	Status 27.10
PDQ006651, 006703 (SSU3)	ready since 332/333 archived – process manually
PDQ006692 (PSD)	**after archiving 316**
PDQ006766 (gift card variants without SKU, created 27.10 ~10:28)	separate issue – leave until Gift Card Hero / Syncube is done

6. Read-only checks

6.1 Shopify products with more than one active template link

```
PGOPTIONS='-c default_transaction_read_only=on' psql -P pager=off -c "SELECT to_jsonb(t)->>'shopify_tmpl_id' AS shopify_product, count(*) AS active_layers, string_agg(t.id::text || '->' || t.product_tmpl_id::text, ', ') AS layer_to_odoo_template FROM shopify_product_template_ept t WHERE t.active AND t.shopify_instance_id = 1 GROUP BY 1 HAVING count(*) > 1 ORDER BY 1;"
```

6.2 Variant links under two template links (replace 316, 324)

```
PGOPTIONS='-c default_transaction_read_only=on' psql -P pager=off -c "SELECT v.id, to_jsonb(v)->>'variant_id' AS shopify_variant, (to_jsonb(v)->>'shopify_template_id') AS tmpl_layer, v.product_id, pp.default_code, pp.active AS product_active, v.active AS link_active FROM shopify_product_product_ept v JOIN product_product pp ON pp.id = v.product_id WHERE (to_jsonb(v)->>'shopify_template_id')::int IN (316, 324) ORDER BY 2, 3, 1;"
```

6.3 After check (replace IDs)

```
PGOPTIONS='-c default_transaction_read_only=on' psql -P pager=off -c "SELECT 'tmpl' AS t, id, product_tmpl_id, active FROM shopify_product_template_ept WHERE id IN (316, 324) UNION ALL SELECT 'var', id, product_id, active FROM shopify_product_product_ept WHERE id IN (1169,1170,1171,1172,1173,1195,1196,1197,1198,1199,1280) ORDER BY 1, 2;"
```

6.4 Stuck queue lines with status

```
PGOPTIONS='-c default_transaction_read_only=on' psql -P pager=off -c "SELECT qd.name AS qu
eue, q.id AS line, left(to_jsonb(q)->>'name', 40) AS product, q.state FROM shopify_product_
data_queue_line_ept q JOIN shopify_product_data_queue_ept qd ON qd.id = (to_jsonb(q)->>'pro
duct_data_queue_id')::int WHERE q.state IN ('draft','failed') ORDER BY 1, 2;"
```

6.5 Health check per Shopify product (every variant exactly one active link to an active product)

```
PGOPTIONS='-c default_transaction_read_only=on' psql -P pager=off -c "WITH v AS (SELECT to
_jsonb(t)->>'shopify_tmpl_id' AS sp, to_jsonb(v)->>'variant_id' AS sv, v.active AS la, pp.a
ctive AS pa, pp.default_code AS sku FROM shopify_product_product_ept v JOIN shopify_product
_template_ept t ON t.id = (to_jsonb(v)->>'shopify_template_id')::int JOIN product_product p
p ON pp.id = v.product_id WHERE to_jsonb(t)->>'shopify_tmpl_id' IN ('12109893730568','10709
825028360')), per AS (SELECT sp, sv, count(*) FILTER (WHERE la) AS active_links, count(*) F
ILTER (WHERE la AND pa) AS good_links, min(sku) FILTER (WHERE la AND pa) AS sku FROM v GROU
P BY sp, sv) SELECT sp AS shopify_product, min(sku) AS example_sku, count(*) AS variants, c
ount(*) FILTER (WHERE active_links = 1 AND good_links = 1) AS ok, count(*) FILTER (WHERE NO
T (active_links = 1 AND good_links = 1)) AS problem FROM per GROUP BY sp ORDER BY sp;"
```

7. Next steps

1. Archive 316 (PSD) → after check → process PDQ006692.
2. Archive 114 (T-Shirt Olive) → after check.
3. Process the remaining ready queues one by one.
4. Run 6.1 again – expect only the gift card rows (271/337, 276/338, 303/330).
5. Weekly: 6.1 and the variant check from the 26.10 page.
6. **Never archive or deactivate the Shopify instance.**
