Gift cards – physical cards without code & custom amounts blocked (26.10.2026)

Status 26.10.2026, 17:45: customer case fixed, root cause found, waiting for Gift Card Hero (Syncube) support.

> Shopify store iqdogsport.myshopify.com · app *Gift Card Hero • All-in-one* by Syncube (installed 05.01, usage-based pricing). All checks were read-only except creating one replacement gift card. Customer names, e-mails and full codes are intentionally not stored here; look them up on the order.

1. Customer case

- Order **#IQD-95299** (21.05.2026): physical gift card, **custom amount 125 €**, created by Gift Card Hero as **draft order #D21**, paid, shipped by GLS on 26.05. The order confirmation e-mail showed a red error and no code.
- The buyer gave the card to a friend. On 26.10 the friend wrote that the code (12 letters, ending `…JDEN`) is rejected at checkout as invalid.

2. Investigation (read-only)

Check	Result
Shopify → Gift cards export (77 cards, 05.04 – 24.10)	No card ending `jden`, nothing for #IQD-95299
Gift Card Hero export queue (63 rows)	Not in it – this export is the *eGift e-mail queue*, so physical cards never appear there
Shopify → Discounts, search code	Nothing found
Gift Card Hero → Physical card settings	**Auto assignment: Disabled · Generate new code on sale: off · Uploaded codes: 0 · Send digital copy to purchaser: off**

Result: the code existed only on the printed card. Nothing in Shopify, so checkout correctly said "invalid".

3. Fix done for the customer

1. Shopify → Products → Gift cards → **Create gift card** with the exact code from the card, **125,00 €**, doesn't expire, internal note with the order number. Saved without "code already exists" → confirms it never existed.
2. Card is **Active**, also visible in Gift Card Hero → Reload balance (Code ending jden, 125/125 €).
3. Did **not** use "Send Gift Card" (would e-mail store admin/buyer). Reply e-mail to the recipient: code is now active for 125 €.

4. Root cause – physical cards

Gift Card Hero does **nothing** for physical card sales with the current settings (no code generated, no code assigned, no e-mail). A Shopify gift card exists only if a person creates it by hand.

- **Since 21.09.2026** a staff member creates each card manually a few minutes before fulfilment (matched by amount and time: #IQD-98141, 98176, 98190, 98280, 98403, 98412, 98852, 98910, 98990 – all have a card).
- **Before 21.09** no card was created for these physical-card orders:

Order	Date	Value	Status
#IQD-94432	04.04	70 €	no card
#IQD-94586	11.04	90 €	no card
#IQD-95299	21.05	125 €	fixed 26.10
#IQD-96801	14.07	172 €	no card
#IQD-97438	04.08	150 €	no card
#IQD-97580	12.08	50 €	no card
#IQD-97637	16.08	130 €	no card
#IQD-97640	17.08	50 €	no card
#IQD-97672	19.08	25 €	no card
#IQD-97980	05.09	100 €	no card

Total still open: **877 €**. We cannot recreate them proactively because we don't know which code is printed on which card. **Customer service rule:** if a customer reports an invalid gift card, check this list, then create the card manually with the code the customer gives (same as section 3).

Also check (paid, gift card line never fulfilled): **#IQD-96492** (10 € card, since 24.06), **#IQD-97899** (50 €, since 31.08), **#IQD-97934** (10 € card line pending).

Open question for the warehouse: where did the printed codes come from before 21.09 (pre-printed stack, app, by hand)?

5. Custom amounts blocked

Choosing *Benutzerdefinierte* (custom amount) and clicking KASSE does nothing – for eGift **and** physical. Fixed amounts work.

```
POST https://iq-dogsport.de/a/gifthero/api/card/custom  → 400
{"error":{"statusCode":400,"name":"BadRequestError",
 "message":"Custom gift card amounts are not available in this store."}}
```

Why fixed works and custom doesn't

Type	How it works	Order source
Fixed (10/25/50/100/150 €)	Real Shopify variant (SKU IQD-GG-… / IQD-GC-…), normal cart and checkout – app not involved	`web`
Custom amount	Page sends `id: "custom", price: "…"` to the app server, which creates a **draft order** – this step is refused	`shopify_draft_order`

- Last successful custom order: **#IQD-98910, 19.10.2026** (220 €). Broken since about 20.10.
- Not the cause: Shopify billing (app is usage-based, no plan to downgrade), app permissions (all granted, active).
- Other console errors are unrelated: `rez-bis.js addEventListener` (pre-order app), "preloaded but not used" warnings.
- #IQD-95299 also came through this draft-order route.

6. Support request (Syncube)

Sent from Shopify admin → Settings → Apps → Gift Card Hero → **Get support** (chat widget failed with "problem sending"; the Shopify form is the reliable route). Replies go to mail@iq-dogsport.de. First message: custom amount error (section 5). Follow-up in the same thread: #IQD-95299 / physical card settings.

7. How to check (read-only)

- **Does a code exist?** Shopify → Products → Gift cards → search last 4 characters. Or Gift Card Hero → Reload balance.

- **Custom amount error:** product page in a private window → DevTools → Network → filter `custom` → choose custom amount → KASSE → click the red request → Response tab.
- **Physical cards since a date:** export orders with product "IQ Geschenkgutschein (Karte)" and compare with the gift card export (amount, date, customer).

8. Next steps

1. Wait for Syncube: re-enable custom amounts. Until then only fixed amounts can be sold. If it takes days: decide with Florian whether to hide the custom amount field (theme change, needs go-ahead).
2. Agree with Florian and the warehouse how physical cards should get a code (app *Generate new code on sale* + *Send digital copy*, or keep manual creation) – **do not enable before agreed**.
3. Ask the warehouse about the code source before 21.09.
4. Check the 3 unfulfilled gift card orders.
5. Inform customer service about the list in section 4.
