EU VAT ID in Shopify and Odoo – findings, decision and live solution (28.10.2026)

PDF version · Status for Patricia & Florian · Refund list · Status 27.10 (old)

> **Status 28.10.2026 – live.** Odoo now reads the VAT ID from Shopify reverse-charge orders (2 automation rules in production). Shopify live store switched to **Dynamic tax-inclusive pricing** (decision Florian, 28.10.2026), so a valid VAT ID now lowers the price at checkout. Owner: Hamza. Stakeholders: Patricia, Florian, Elena.

1. Summary

Topic	Before	Now (28.10.2026)
VAT ID entered at Shopify checkout	Not transferred to Odoo by the Emipro connector	**Read automatically from the Shopify order, stored on the customer, VIES checked**
Odoo invoice for reverse-charge orders	Often OSS VAT of the customer's country (VAT the customer never paid)	**Fiscal position "Business partner EU (with VAT ID)", 0% EU D – matches Shopify**
Price paid by a business with VAT ID	Gross price (Shopify removed VAT but kept the price) → refunds	**Price minus local VAT (Dynamic tax display)**
Dealers with company account (B2B)	Correct (net catalog prices, "don't collect tax")	Unchanged
Private customers in other EU countries	Same gross price everywhere	**Price follows the local VAT rate (see 7)**

2. The problem

EU business customers (outside Germany) can enter a VAT ID in the Shopify checkout. Shopify validates it and applies reverse charge ("Reverse charge was applied. A valid VAT number: HU… was provided for this order."). Two things went wrong:

1. **Odoo:** the Emipro connector does not import the VAT ID (it is only in the Shopify order *events*, not in the REST order data, localizedFields or customAttributes). In Odoo the customer had no VAT ID, the order got the OSS fiscal position of the customer's country (e.g. "OSS B2C Hungary" 27%) and the invoice showed VAT the customer never paid.
2. **Shopify price:** with fixed tax-inclusive prices ("Show as included"), Shopify removes the VAT but **keeps the gross price**. Example: jacket €279.90 → business with valid VAT ID still

pays €279.90, tax €0.00 (should be ≈ €235.21 net). Customers then ask for a refund (e.g. Fodor).

Since April this happened in **14 orders** (list from Patricia): #IQD-94603, 94847, 96441, 96555, 96556, 97075, 97529, 98321, 98713, 98815, 98874, 98902, 99056, 99141. Two were dealers who ordered as normal customers instead of via their company account (#IQD-96555/96556 The Kill, #IQD-98815 Edog). New case on 28.10: #IQD-99202 (HU18283822, €308.80, bank deposit pending).

3. Findings

3.1 Odoo setup was already right – only the input was missing

- Fiscal position 6 "Business partner EU (with VAT ID)" (auto apply, VAT required, EU country group, 0% EU D, account 812500) and the OSS B2C positions exist and work.
- VIES check: production on since 27.10 (Patricia), staging switched on 28.10.
- Customers that already have a VAT ID in Odoo (dealers) automatically get fiscal position 6. Production check: of 83 EU orders since 01.04 from customers with a VAT ID, 76 were invoiced correctly.
- Emipro sets the fiscal position from the Shopify market (`prepare_shopify_order_vals`, sale_order.py) and creates order lines *without tax* when Shopify sends no tax lines.
- The VAT ID is only available via GraphQL order `events`; `instance.get_graphql_client().execute()` can be called from an automation (safe_eval).

3.2 Shopify behaviour

- **Fixed / "Show as included" / line item:** VAT ID → tax line becomes €0, price stays. There is no setting to change this.
- **Dynamic tax-inclusive pricing:** Shopify takes out the German 19% and adds the customer's VAT. With a valid VAT ID the VAT is removed and the price drops. Test store: Hungary private €280.80 (with −6% HU sub-market), with VAT ID €221.10.
- Market price adjustments only accept whole percentages; one percentage per market. Grow plan reportedly allows only 3 markets (Basic/Grow 3, Advanced 3–50, Plus 50) – to be confirmed in admin.
- Checkout customization and private Shopify Functions need Shopify Plus (~$2,300+/month). Even on Plus, custom code cannot read Shopify's native VAT field.
- Since 01.01.2026 new legacy custom apps cannot be created in the Shopify admin. Dev Dashboard apps install directly only on development stores; the custom install link for the test store was rejected ("installation link is invalid"). The existing "Odoo Staging Connector" has no `draft_orders` scope.

3.3 Dealers (Shopify B2B companies)

- Dealers are Shopify **Companies** (Customers → Companies) with catalog **IQ-Händler-B2B-Gold** (fixed net prices, e.g. Sommerweste 3.0 €79.90 vs. retail €129.90) and location tax setting **"Don't collect tax"**.
- Proof: #IQD-99203 CaniTess (BE) – dealer prices, no tax in Shopify, Odoo 0% EU D, totals equal (€1,213.57).
- Edog Kalypsoland: location switched to "Don't collect tax" by Chantal on 16.06; #IQD-95400 (25.05) was before that and was charged 21% RO VAT in Shopify (still "payment pending"; Odoo invoice RE/2026/01277 at 0%).
- Company locations often have **no VAT number** stored ("VAT number: Not provided"). Several companies show "No main contact" (ordering still possible via assigned customers).
- Dynamic does not adjust fixed catalog prices – dealers should be unaffected (to be verified with one company order after the switch).

3.4 Open finding

#IQD-98746 and #IQD-94400 (Austria): Shopify charged no VAT although there was no company and no VAT ID. Cause not found yet (customer tax exempt? draft order without tax? product "charge tax" off? Austria override?).

4. Options we evaluated

Option	Result	Why (not)
A. Keep fixed prices, refund by hand	Rejected	Manual work, unhappy customers
B. Switch off VAT ID field, VAT-free only via company account (Patricia's proposal)	Alternative	Free, no price change; customers must request an account first
C. Dynamic tax-inclusive pricing	**Chosen**	Automatic, no app, no development; private EU prices follow local VAT
D. Shopify app (cart VAT field): TAX Exemption & VAT e-invoices ($9.99), Exemptify ($4.99), Wezy Tax Exempt ($24.99), EUVAT.app (usage based)	Not needed now	Not tested; must reduce price before payment and import correctly into Odoo
E. Own development: cart VAT field + draft order at net price	Stopped	Needs a Shopify app token with draft-order scope (blocked for the test store), backend and theme work. Prototype script `vat_draft_order_prototype.py` written, never run.
F. After-the-fact automatic refund via Odoo	Rejected	Customer pays gross first – not wanted
G. Shopify Plus	Rejected	Too expensive, does not solve the native VAT field problem

5. Decision

- **28.10.2026 – Florian:** Dynamic tax display is OK → switched on in the live store.
- Odoo automations activated in production (Hamza, 28.10.2026).
- Still for Patricia: price adjustment on the EU market (yes/no, how much), prices for non-EU customers, refunds of past orders (section 10).

6. Changes made

System	Change	When / who
Odoo production	Company setting "Verify VAT numbers (VIES)" on	27.10, Patricia
Odoo staging	VIES on; test server action "IQ – Check reverse-charge VAT (test)"; automations 1+2 (tested)	28.10, Hamza
Odoo production	Automation rule **"IQ – EU VAT from Shopify reverse charge"** (Sales Order, on create)	28.10, Hamza
Odoo production	Automation rule **"IQ – EU VAT: 0% tax on reverse-charge lines"** (Sales Order Line, on create)	28.10, Hamza
Odoo production	#IQD-99202: VAT HU18283822 on customer Christian Helmut Buchenau, fiscal position 6, taxes 0% EU D (manual, imported before the rules)	28.10, Hamza
Shopify live	**Dynamic tax-inclusive pricing on** (Markets → European Union → Taxes and duties)	28.10, decision Florian
Shopify test store	Dynamic on; sub-market "EU – Hungary 27%" (catalog −6%, EUR, no rounding); test product €119	28.10, Hamza
Shopify Dev Dashboard	Apps "IQ VAT prototype (TEST ONLY)" and "IQ VAT prototype TEST2" created, 0 installs, scopes read_products/read+write_draft_orders only – can be deleted	28.10, Hamza

7. How it works now

Customer	Shopify checkout	Odoo
Germany, private	€279.90 incl. 19% (unchanged)	Domestic 19% – no automation message
Other EU country, private	Price recalculated with local VAT (e.g. HU 27%: €298.72 without adjustment)	OSS B2C of the country – no automation message
Other EU country, valid VAT ID at checkout	Price minus local VAT, tax €0 ("Reverse charge was applied")	Automation 1: VAT on customer, VIES, fiscal position 6, 0% EU D, note "IQ VAT: This order contains VAT ID ..."; Automation 2 adds 0% EU D to lines without tax

Dealer via company account	Fixed net catalog price, "don't collect tax"	Already has VAT + fiscal position 6 → skipped
Outside the EU	Shopify shows prices without VAT	Export fiscal position – check first orders

> **Private price changes with Dynamic (without market adjustment), example €279.90:** LU 17% €275.20 (−1.7%) · AT/FR/BG 20% €282.25 (+0.8%) · NL/BE/ES/RO/CZ/LV/LT 21% €284.61 (+1.7%) · IT/SI 22% €286.95 (+2.5%) · PL/PT/IE/SK 23% €289.31 (+3.4%) · GR/EE 24% €291.66 (+4.2%) · DK/SE/HR 25% €294.02 (+5.0%) · HU 27% €298.72 (+6.7%). A price adjustment of −2% on the EU market keeps the 21% countries ≈ unchanged.

8. Code

All code is also in the folder `code/`.

Automation 1 – Sales Order, on create

Domain (Apply on):

```
[("shopify_instance_id", "!=", False), ("partner_shipping_id.country_id.code", "in",
["AT","BE","BG","HR","CY","CZ","DK","EE","FI","FR","GR","HU","IE","IT","LV","LT","LU","MT",
"NL","PL","PT","RO","SK","SI","ES","SE"])]

Check after saving: it must read "Shopify Instance is set" (in staging the domain editor
once turned it into "!= 2").
```

```
 # Odoo 19 - Automation Rule (PRODUCTION since 28.10.2026)
# Name:     IQ - EU VAT from Shopify reverse charge
# Model:    Sales Order (sale.order)
# Trigger:  On create
# Apply on: see domain_automation_1.txt
# Action:   Execute Code (paste everything below this header)
#
# What it does: when Shopify applied reverse charge ("Reverse charge was applied.
# A valid VAT number: XX..." in the Shopify order events), store the VAT ID on the
# customer (Odoo runs the VIES check), set the "VAT required" fiscal position
# (Business partner EU (with VAT ID)), update taxes (0% EU D) and post a note.
# Never changes prices. Skips dealers that already have VAT + B2B fiscal position.

MARK = "A valid VAT number:"
QUERY = "query($id: ID!) { order(id: $id) { events(first: 50) { nodes { message } } } }"
for order in records:

```

9. Tests

Test	Where	Result
Read VAT from Shopify events (#1134/#1133 FOUND HU26095745; #1132 tax 8.26 → nothing; #1131 DE → nothing)	Staging, server action	**OK**

#1135 HU + VAT: fiscal position set, but lines without tax → Automation 2 added	Staging	**Fixed**
#1136 HU private → OSS Hungary 27%	Staging	**OK**
#1138 / #1139 (IQD-POS-1139) HU + VAT → fiscal position 6, 0% EU D, VAT + VIES valid on customer, chatter notes	Staging (fixed tax display)	**OK**
Dynamic: HU private €280.80, HU + VAT €221.10, fixed: €279.90 both	Test store checkout only	**OK**
Dealer order via company: #IQD-99203 CaniTess – totals equal, 0% EU D	Production	**OK**
Import of Dynamic-priced orders into Odoo (DE, HU private, HU + VAT, AT/NL, CH, company)	—	**Not tested before the live switch → monitor first live orders (query 5)**

Test VAT ID for test store/staging only: `HU26095745` (real company – never use in the live shop). Invalid test: `HU12345678`.

10. Past orders (01.04.–28.10.2026)

Status	Orders	Amount
Already refunded	#IQD-98418 (Shopify refund 02.10), #IQD-97529 (RRE/2026/00441), #IQD-96441 (RRE/2026/00230)	€225.30
Still open	#IQD-98001 ActiveOutdoorGear NL €217.24, #IQD-97415 ProDogs GR €112.31	€329.55
To confirm	#IQD-95400 Edog – invoice already 0%, Shopify "payment pending" – probably nothing to refund	(€329.79)
To check	ProDogs credit balance −€703.41 (= order total, possible double payment); #IQD-97529 / #IQD-96441 original invoices still contain ES/HU OSS VAT (OSS correction? – Florian)	
New	#IQD-99202 – €308.80 gross, bank deposit pending: correct to net before payment? (Patricia)	

11. Open items / next steps

1. **Monitor the first live orders after the Dynamic switch** (query 5): Shopify total = Odoo total for DE, EU private, EU + VAT ID, non-EU and one company order.
2. Check Emipro tax setting `apply_tax_in_order` on production and staging (query 1).
3. Patricia: EU market price adjustment (e.g. −2%) and non-EU prices (now shown without VAT).
4. Patricia/Florian: refunds #IQD-98001, #IQD-97415, #IQD-99202; confirm #IQD-95400; ProDogs credit; OSS correction.
5. Austria #IQD-98746 / #IQD-94400 – find why no VAT was charged.
6. Elena: add the VAT number to every EU company location; tell dealers to always order logged in.

7. Check German dealers (company location "collect tax"): is 19% added on top of the catalog price or included?
8. Cleanup: delete Dev Dashboard apps "IQ VAT prototype (TEST ONLY)" and "TEST2"; test store sub-market "EU – Hungary 27%" if not needed.
9. Florian: legal note text for reverse-charge invoices.

12. Rollback

- **Odoo:** Settings → Technical → Automation Rules → open each "IQ – EU VAT ..." rule → untick *Active*. Nothing else to undo (VAT IDs on customers stay, they are correct).
- **Shopify:** Markets → European Union → Taxes and duties → switch Dynamic tax-inclusive pricing off. Orders already placed are not changed.

13. Read-only queries

Run with `PGOPTIONS='-c default_transaction_read_only=on' psql -P pager=off -c "…"`.

```
 -- All read only. Run on Odoo.sh shell with:
-- PGOPTIONS='-c default_transaction_read_only=on' psql -P pager=off -c "<query>"

-- 1. Emipro tax setting (decides whether Odoo or Shopify taxes are used on import)
SELECT id, name, apply_tax_in_order FROM shopify_instance_ept;

-- 2. VIES check switch per company
SELECT id, name, vat_check_vies FROM res_company;

-- 3. EU orders since 01.04 where the customer has a VAT ID but VAT was charged
SELECT so.name, so.date_order::date, c.code AS country, cp.vat, cp.vies_valid,
