EU VAT ID in Shopify and Odoo – Status

IQ Dogsport GmbH · 28.10.2026 · Hamza Mohsin · for Patricia & Florian

In short

- **Fixed in Odoo:** VAT IDs from Shopify reverse-charge orders are now read automatically. Odoo stores the VAT ID on the customer and invoices at 0% EU D. Shopify and Odoo are in sync.
- **Still open in Shopify:** with our fixed prices, a customer who enters a VAT ID still pays the gross price. A decision is needed (section 3).

1. What was the problem

EU business customers can enter their VAT ID at the Shopify checkout. Shopify checks it and applies reverse charge (0% VAT). But the Shopify connector (Emipro) did **not transfer this VAT ID to Odoo**. So in Odoo:

- the customer had no VAT ID,
- the order got the normal OSS tax of the customer's country (e.g. OSS Hungary 27%),
- the Odoo invoice showed VAT that the customer never paid in Shopify.

Shopify and Odoo were therefore not in sync for these orders.

2. What is fixed now in Odoo

The VIES check is active. The solution was tested in staging first and then added in production as two automations:

Automation	What it does
IQ – EU VAT from Shopify reverse charge (Sales Order, on import)	When Shopify applied reverse charge with a valid VAT ID: reads the VAT ID from the Shopify order, stores it on the customer (VIES check), sets fiscal position **“Business partner EU (with VAT ID)”**, sets taxes to **0% EU D**, writes a note *“IQ VAT: This order contains VAT ID …”*
IQ – EU VAT: 0% tax on reverse-charge lines (Sales Order Line)	Safety net: a line of such an order that arrives without any tax gets 0% EU D.

Not affected: prices are never changed · German orders, private EU customers and orders without VAT ID stay as before · dealers ordering via their company account (e.g. #IQD-99203 CaniTess) were already correct and are not touched.

#IQD-99202 (Hungary, VAT HU18283822) was imported before the automations existed and was corrected by hand: VAT ID on the customer, order at 0% EU D.

Result: Shopify and Odoo are in sync for VAT ID orders – the Odoo invoice matches what Shopify charged. Both automations can be switched off immediately if needed (untick “Active”).

3. Still open: the Shopify price

Our Shopify prices are fixed and include VAT. When a customer enters a VAT ID, Shopify removes the VAT but **does not lower the price**.

Example	Private customer	Business with VAT ID	Correct for business
Jacket, Hungary	€279.90 (incl. VAT)	€279.90, VAT €0.00 (too much)	≈ €235.21 net

The customer pays too much and asks for a refund (e.g. Fodor). **14 orders since April:** #IQD-94603, 94847, 96441, 96555, 96556, 97075, 97529, 98321, 98713, 98815, 98874, 98902, 99056, 99141. Two are dealers who ordered as normal customers instead of via their company account (#IQD-96555/96556 The Kill, #IQD-98815 Edog).

New case today: #IQD-99202, €308.80, payment still pending (bank deposit) – the amount can still be corrected before payment.

Dealers with a company account are fine: they see net dealer prices (catalog “IQ-Händler-B2B-Gold”) and pay no VAT (“don't collect tax”).

Option	How it works	Limits
1 – Switch off VAT ID field at checkout (recommended)	Customers who want to buy without VAT ask for a company account. Elena checks VIES and creates them in Shopify B2B (without dealer prices).	Free, no price changes, no refunds. Customers must request an account first.
2 – Dynamic tax display	Tested: the VAT ID lowers the price automatically (Hungary €280.80 → €221.10).	Private prices change per EU country. Can be reduced with an EU price adjustment, not fully. Plan reportedly allows only 3 markets.
3 – Shopify app (own VAT field in cart)	TAX Exemption & VAT e-invoices (from $9.99/month) · Wezy Tax Exempt ($24.99/month) · EUVAT.app ($15/month + 3.5%, max. €100/month)	Needs testing: price reduced before payment, correct 0% tax, correct Odoo import.

The Odoo automations work with all three options.

4. Past orders (01.04.–28.10.2026)

Of 83 EU orders from customers with a VAT ID, **76 were invoiced correctly**. 6 were charged VAT although a VAT ID is known today (€884.64):

Status	Orders	Amount
Already refunded	#IQD-98418, #IQD-97529, #IQD-96441	€225.30
Still open	#IQD-98001 (€217.24), #IQD-97415 (€112.31)	**€329.55**
To confirm	#IQD-95400 Edog – invoice already 0%, probably nothing to refund	(€329.79)
To check	ProDogs credit balance −€703.41 (possible double payment)	

Details: EU_B2B_VAT_Refund_List_2026-10-28.pdf

5. Open question

#IQD-98746 and #IQD-94400 (both Austria): Shopify charged no VAT although there was no company and no VAT ID. Still being checked.

6. Decisions needed

1. Shopify: Option 1, 2 or 3?
2. Florian: OK from the tax side to switch off the VAT ID field at checkout?
3. #IQD-99202: correct the amount to the net price before the customer pays?
4. Refund #IQD-98001 and #IQD-97415?

No changes in Shopify until we have your OK.
