Exchange deliveries from tickets without carrier – fallback rule (03.11.2026)

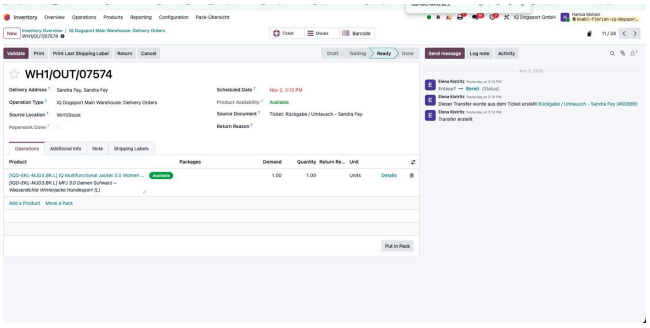

PDF version · Code

> **Status 03.11.2026: rule created in Staging, testing.** Not yet in Production. Production cases are fixed by hand until the rollout. Owner: Hamza.

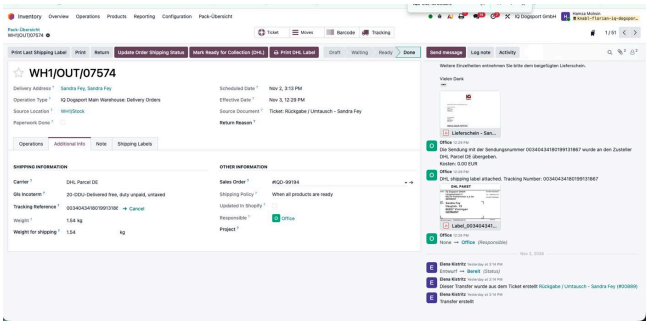

1. Problem

Exchange deliveries created from a Helpdesk ticket (button *Replace* / Umtausch) have **no carrier**. Without a carrier no DHL/GLS label is created, and "Block Validate without Carrier" stops validation.

Example Production: **WH1/OUT/07574** (Sandra Fey, ticket #00889, order #IQD-99194) – carrier empty, set to DHL Parcel DE by hand on 03.11., label created afterwards. Staging: **WH1/OUT/06894** (ticket #00821) – same.

Production WH1/OUT/07574 created from ticket #00889 – no carrier

Same delivery after carrier set by hand – DHL label created

2. Cause

```
NORMAL ORDER (works)
Shopify/Odoo order (quotation) → rule 8 / 45 sets DHL or GLS on the ORDER
→ order confirmed → the ORDER creates the delivery
→ route option "Propagation of carrier" copies the carrier → delivery has DHL/GLS ✓

EXCHANGE FROM TICKET (empty)
```

```
Ticket → Replace → the TICKET creates the delivery directly
(sales order only written as a reference)
→ no route, no "Propagation of carrier" → carrier EMPTY ✗
→ rules 8 / 45 don't help: they only run on SALES ORDERS in quotation state
```

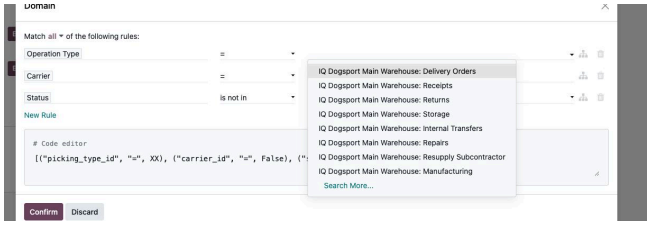

Why it worked before 27.10: rule *Auto Set Carrier* (id 7) ran on every delivery and always wrote GLS Germany – a safety net for deliveries without an order. It was archived at the DHL go-live (correct for normal orders, see DHL go-live 27.10), which removed the fallback for ticket/manual deliveries. Do **not** unarchive rule 7: it would switch every delivery back to GLS.

3. Fix – new automation rule

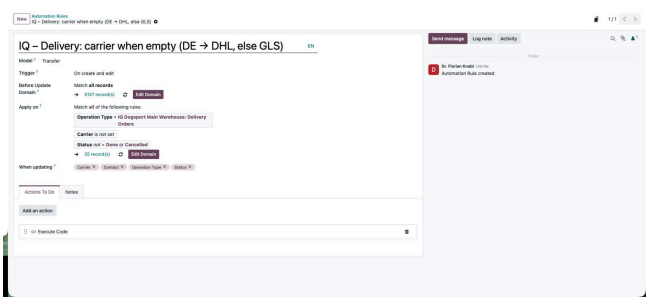

Field	Value
Name	IQ – Delivery: carrier when empty (DE → DHL, else GLS)
Model	Transfer
Trigger	On create and edit
Apply on	Operation Type = *IQ Dogsport Main Warehouse: Delivery Orders* · Carrier is not set · Status not Done/Cancelled
When updating	Carrier, Contact, Operation Type, Status
Action	Execute Code (below)

```
 # Odoo 19 - Automation Rule
# Name:           IQ - Delivery: carrier when empty (DE -> DHL, else GLS)
# Model:          Transfer (stock.picking)
# Trigger:        On create and edit
# Apply on:       Operation Type = "IQ Dogsport Main Warehouse: Delivery Orders"
#                 AND Carrier is not set AND Status not in Done/Cancelled
#                 code: [("picking_type_id", "=", <Delivery Orders id>), ("carrier_id", "=",
False), ("state", "not in", ["done", "cancel"])]
# When updating: Carrier, Contact, Operation Type, Status
# Action:         Execute Code (below)
#
# Fallback for deliveries that are NOT created by a sales order (Helpdesk Replace/exchange,
# manual deliveries). Never overwrites an existing carrier. Skips POS transfers.

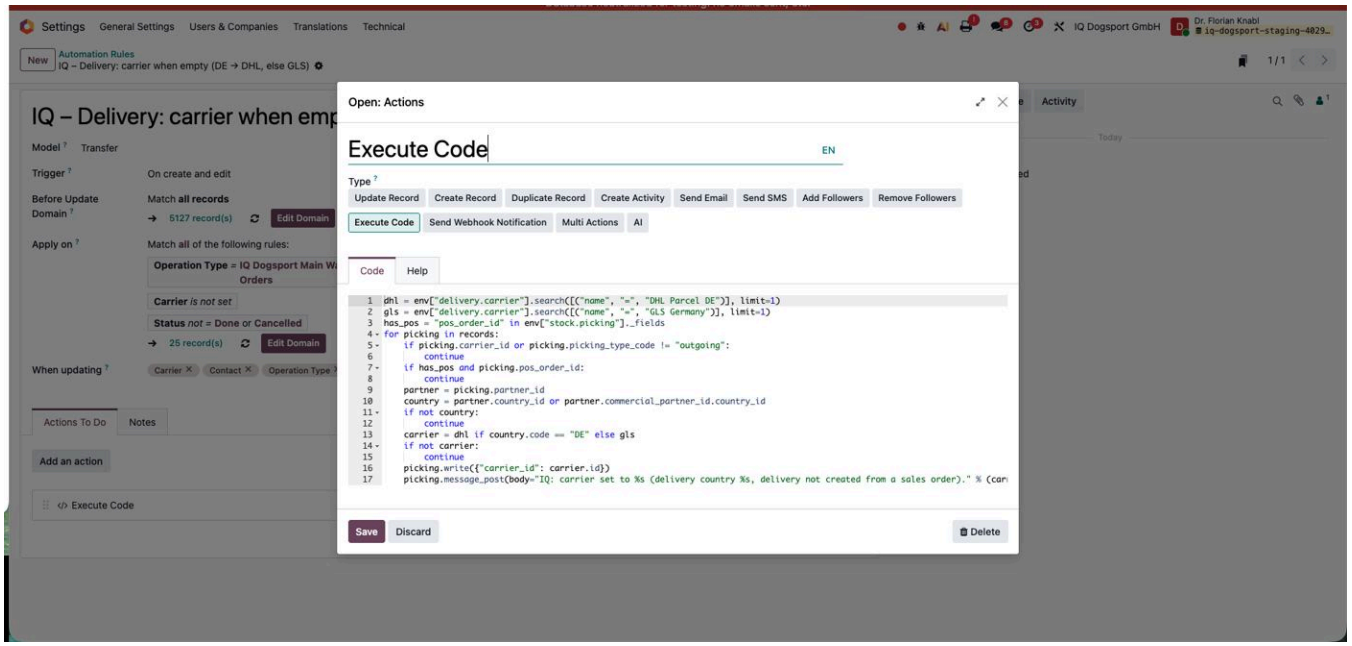

dhl = env["delivery.carrier"].search([("name", "=", "DHL Parcel DE")], limit=1)
gls = env["delivery.carrier"].search([("name", "=", "GLS Germany")], limit=1)
has_pos = "pos_order_id" in env["stock.picking"]._fields
for picking in records:
    if picking.carrier_id or picking.picking_type_code != "outgoing":
        continue
    if has_pos and picking.pos_order_id:
        continue
    partner = picking.partner_id
    country = partner.country_id or partner.commercial_partner_id.country_id
    if not country:
        continue
    carrier = dhl if country.code == "DE" else gls
    if not carrier:
        continue
    picking.write({"carrier_id": carrier.id})
    picking.message_post(body="IQ: carrier set to %s (delivery country %s, delivery not
created from a sales order)." % (carrier.name, country.code))
```

Apply on: choose Operation Type “Delivery Orders” from the list (Odoo inserts the id)

Final rule in Staging

Execute Code action

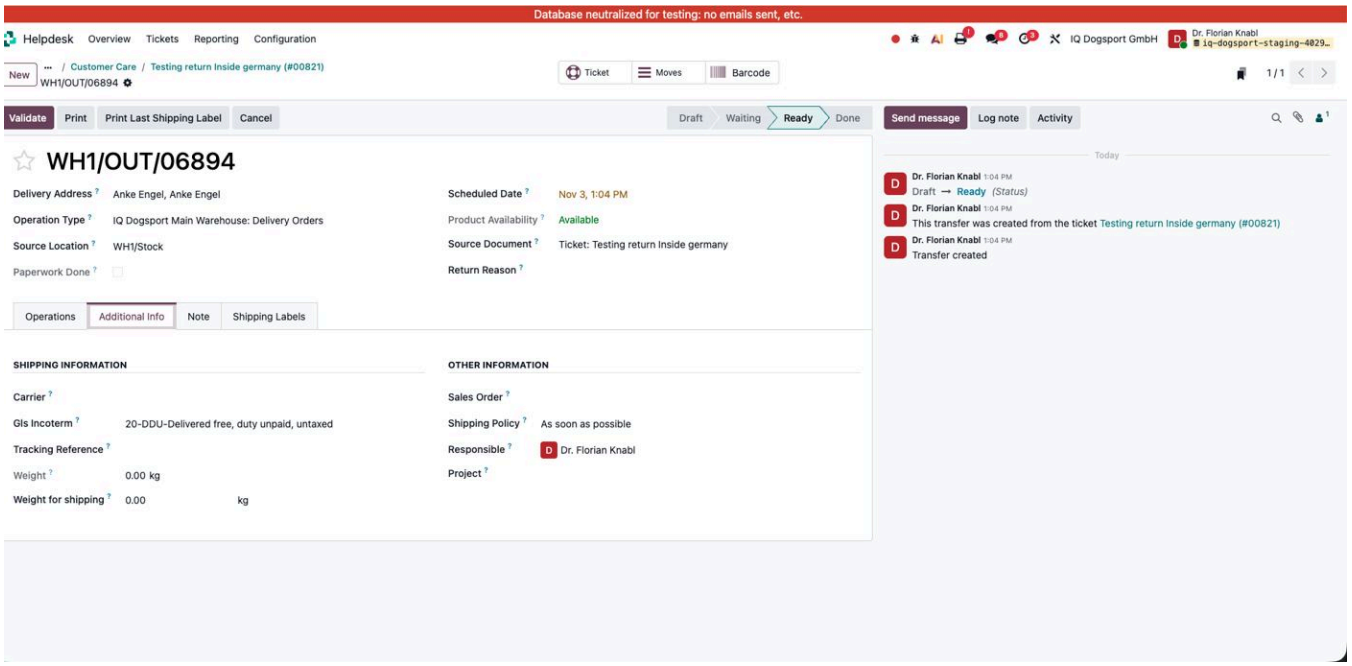

4. Why nothing else breaks

Risk	Protection
Overwriting a chosen carrier (Direct Sales, DHL International, manual)	Runs only when the carrier is empty
Normal order deliveries	Get the carrier from the order at creation → never empty → skipped
POS / shop sales	Only operation type “Delivery Orders”; code skips POS transfers
Returns, receipts	Only outgoing deliveries
Done / cancelled deliveries	Excluded
Customer without country	Skipped – set carrier by hand
Other rules (Incoterm EFTA/Outside EU, Block Validate, packing card, 8/45)	Unchanged; incoterm rules may run after the carrier is set (only incoterm)
Loop	After writing, “carrier empty” no longer matches

5. How the trigger behaves (important for tests)

- On **create** the rule always runs → every new exchange from a ticket gets a carrier.
- On **edit** it runs only when Carrier, Contact, Operation Type or Status changes. Changing e.g. the Scheduled Date does **not** trigger it (first staging test on WH1/OUT/06894 showed exactly this). Scheduled Date is deliberately not added.

- Deliveries that existed before the rule (Staging: 25 open without carrier) are only filled when one of these fields changes, or with the one-off server action (section 7).

Staging WH1/OUT/06894 – created from ticket #00821 before the rule existed

6. Tests (Staging)

Test	Expected	Result
Ticket → Replace, customer in Germany (new delivery)	DHL Parcel DE + chatter “IQ: carrier set …”	open
Ticket → Replace, customer outside Germany	GLS Germany	open
Normal sales order delivery	keeps order carrier, no IQ note	open
WH1/OUT/06894: change Contact and back	DHL Parcel DE	open
WH1/OUT/06894: change Scheduled Date	no change (field not watched)	✓ as expected
POS sale (if used)	no carrier, no note	open

7. Production rollout

1. Run read-only check 2 (open deliveries without carrier). Deliveries that must stay without carrier (customer pickup): set *Direct Sales* first.
2. Create the rule exactly as in section 3 (choose “Delivery Orders” from the list – the id differs between systems).
3. Optional one-off for the existing open deliveries: Server Action *IQ – Fill empty carrier (one-off)*, Model Transfer, same code → Create Contextual Action → select the deliveries from check 2 → Action → run. Check result with check 3.

4. Next exchange from a ticket: check carrier + chatter note.
5. Add to the rule table of DHL go-live 27.10: “IQ – Delivery: carrier when empty – fallback for deliveries not created from a sales order”.

Rollback: untick Active on the rule. Carriers already set stay (correct values).

8. Read-only checks

```
 -- Read only: PGOPTIONS='-c default_transaction_read_only=on' psql -P pager=off -c "
<query>"

-- 1. Outgoing operation types (find the id of "Delivery Orders", WH1)
SELECT t.id, t.code, to_jsonb(t)->'name'->>'en_US' AS name, w.code AS wh FROM
stock_picking_type t LEFT JOIN stock_warehouse w ON w.id=t.warehouse_id WHERE
t.code='outgoing' AND t.active ORDER BY t.id;

-- 2. Open deliveries without carrier (check BEFORE activating / before the one-off fill)
SELECT sp.name, sp.origin, sp.state, c.code AS country FROM stock_picking sp JOIN
stock_picking_type t ON t.id=sp.picking_type_id LEFT JOIN res_partner p ON
p.id=sp.partner_id LEFT JOIN res_country c ON c.id=p.country_id WHERE t.code='outgoing' AND
sp.carrier_id IS NULL AND sp.state NOT IN ('done','cancel') ORDER BY sp.id;

-- 3. Deliveries filled by the rule (chatter note)
SELECT m.date, sp.name, left(regexp_replace(m.body,'<[^>]+>','','g'),120) AS note FROM
mail_message m JOIN stock_picking sp ON sp.id=m.res_id AND m.model='stock.picking' WHERE
m.body LIKE '%IQ: carrier set to%' ORDER BY m.date DESC LIMIT 30;
```
